

Mobile Phones - Care and Troubleshooting Guide

Policy version 2026-01

1.1 Mobile phones - battery drains quickly. Check battery health in settings. A battery that falls below 80 percent health within the warranty period is treated as a battery defect.

1.2 Mobile phones - phone does not switch on. Charge the phone for 30 minutes with the original charger and hold the power button for 15 seconds. If it still does not switch on it is a mainboard or battery fault.

2.1 Mobile phones - screen damage. A cracked or shattered screen is physical damage. It is not a manufacturing defect.
