

Laptops - Care and Troubleshooting Guide

Policy version 2026-01

1.1 Laptops - laptop does not charge. Check the charger light and try another wall socket. If the battery does not charge with a working charger it is a battery or charging circuit fault.

1.2 Laptops - keyboard keys not working. Restart the laptop and test the keys in the BIOS screen. Keys that fail there have a hardware fault.

2.1 Laptops - liquid spills. Liquid spilled on a laptop is liquid damage. Switch the laptop off at once. Liquid damage is not a manufacturing defect.
